This document was produced using Microsoft Word 97 using information taken from the **IGI List** version 4.00.

The data has been inserted into a table and, when used in Word 97, can easily be sorted in whatever way the user wishes. If, for example you wish to sort the document into the 'same spelling' of the surname, simply move the cursor onto the top of Column 2 until it becomes a black arrow, then click with the left mouse button. The column will then become enabled. Click onto 'Table' from the top menu, then 'Sort' then OK. The document will then display in sequential order, grouping all names with the same spelling together.

The table can of course be sorted in any column preference using the above method.

Another example: Sorting by 'Father's Name', you would then see more clearly how many children are descended from the father of that particular family.
